EDUCATION & CERTIFICATIONS

Certifications: CCBA | CSPO (Agile) | SAFe® Agile | Advanced AI in Product Management

B.Tech, Marine Engineering — Indian Maritime University, India | Aug 2011 – Nov 2015

WORK EXPERIENCE

Euromonitor International (B2B Market Intelligence — Subscription SaaS)

Product Manager | May 2021 – Present | Bangalore

AI Product Ownership

- Enterprise clients were spending 8+ hours digging through market data with no easy way to ask a question and get an answer; I took Passport AI from idea to live product — built on GPT-4 and RAG — and grew it from 200 to 10,000+ weekly users now running 35,000+ natural-language queries a week, cutting research time by 80% and lifting retention by 10%.
- AI answers were wrong often enough (60% accuracy) that clients wouldn't trust them; I worked with data science to fix retrieval logic and prompt design across 6 sprints, pushing accuracy to 85% and cutting hallucinations by 65%.
- Clients wouldn't act on an answer they couldn't trace; I wrote 50+ user stories for a RAG pipeline that cites every data point, and worked through compliance and legal sign-off so regulated enterprises could adopt it.
- Copilot and Claude users had no way to reach Euromonitor's data inside their own tools; I shipped MCP servers — now live on the Microsoft marketplace — as a pilot across 100 enterprise accounts, reaching 500 weekly users and growing 10% week-on-week for the last month.
- Customers wanted our intelligence inside their own AI agents, not just our UI; I led the customer-facing API product, shipped Phase 1, and signed two early adopters — an AI-agent startup and a Fortune 50 consumer goods company — while building Phase 2.
- Nobody could see what was breaking after release; I built telemetry and feedback loops that turned production usage into roadmap calls, and shipped 3 major releases in 12 months.

AI Enablement & Internal Tooling

- Product managers were losing hours to repetitive writing — PRDs, updates, analysis; I built PM-OS, a Claude Code toolkit installable from GitHub, that now handles 41+ tasks across the product lifecycle and saves the 5 PMs using it roughly 2 hours a day each. A lightweight UI version is in progress.
- Most of the org treated AI as a search box; I run AIAB, a leadership-backed enablement program, where I've delivered 5 hands-on sessions on Claude Code, Copilot, and Codex to 150+ employees in 5 months — work that helped grow Copilot adoption ~90% and got Claude approved for org-wide rollout.

Agile Delivery & Team Leadership

- Sprint carryover was stuck at 40%; I ran planning, standups, and retros for a squad of 8 engineers and 3 data scientists, brought in story-point estimation, and cut carryover to 12% over 6 months.
- Passport AI had 15+ cross-team dependencies across data, compliance, and infrastructure; I tracked the risks weekly and escalated 3 critical blockers to VP level to land a \$10M revenue feature on time.
- Research ops were slow and manual; I led the Azure migration and the Copilot and Power Automate integrations, cutting reporting time by 35%.
- The BA team of 3 couldn't keep up with demand; I scaled it to 15 over two years by building real hiring, onboarding, and QA processes.

Viswa Group (B2B SaaS — Fleet Operations)

Assistant Product Manager | Mar 2019 – May 2021 | Bangalore

- Operators running 100+ vessels had no live view of performance and found out about problems too late; I owned SVMS end-to-end, shipping live KPI dashboards, tracking, and alerts that cut incident response time by 20%.
- The platform handled 500K+ data points a day and the API had slowed to a crawl; I wrote the requirements for the data ingestion pipeline and worked with backend engineers to bring API response time from 8s down to 1.2s.
- A confusing monitoring UI was slowing operators down; I worked with design, ran usability testing, and simplified it — retention went up 12%.
- Billing questions were flooding support; I shipped a self-serve usage-based billing dashboard that cut 50+ manual tickets a month and raised billing NPS by 12 points.

Fleet Management Ltd — Marine Engineer | Oct 2017 – Nov 2018 | Hong Kong

Shipping Corporation of India — Marine Engineer | Jan 2016 – Jul 2017 | Mumbai

Early career operating regulated, high-stakes shipboard systems — the foundation for systems thinking and disciplined execution.
